

## Lab Sheet 01

---

### Introduction to HTML

By the end of this lab, you will be able to create a foundational web page using HTML.

**Preparation:** Create a project folder named with your student number (e.g., XX\_2022\_XXX) Open Notepad on your computer.

#### Task 1: Setting up the HTML Skeleton

Save the file named `index.html`. Write the standard HTML5 boilerplate. Include the `<!DOCTYPE html>` declaration, `<html>`, `<head>`, and `<body>` tags. Set the `<title>` of the page to "My First Web Page".

#### Task 2: Adding Headings and Text

Inside the `<body>` of your document, add a main heading (`<h1>`) with your name. Below that, add a subheading (`<h2>`) that says "About Me". Finally, write a short paragraph (`<p>`) introducing yourself as student.

#### Task 3: Creating Lists

Below your introduction, add another subheading (`<h2>`) called "My Tech Interests". Create an unordered list (`<ul>`) and add at least three list items (`<li>`) representing your interests (for example: Building PCs, Artificial Intelligence, and Web Development).

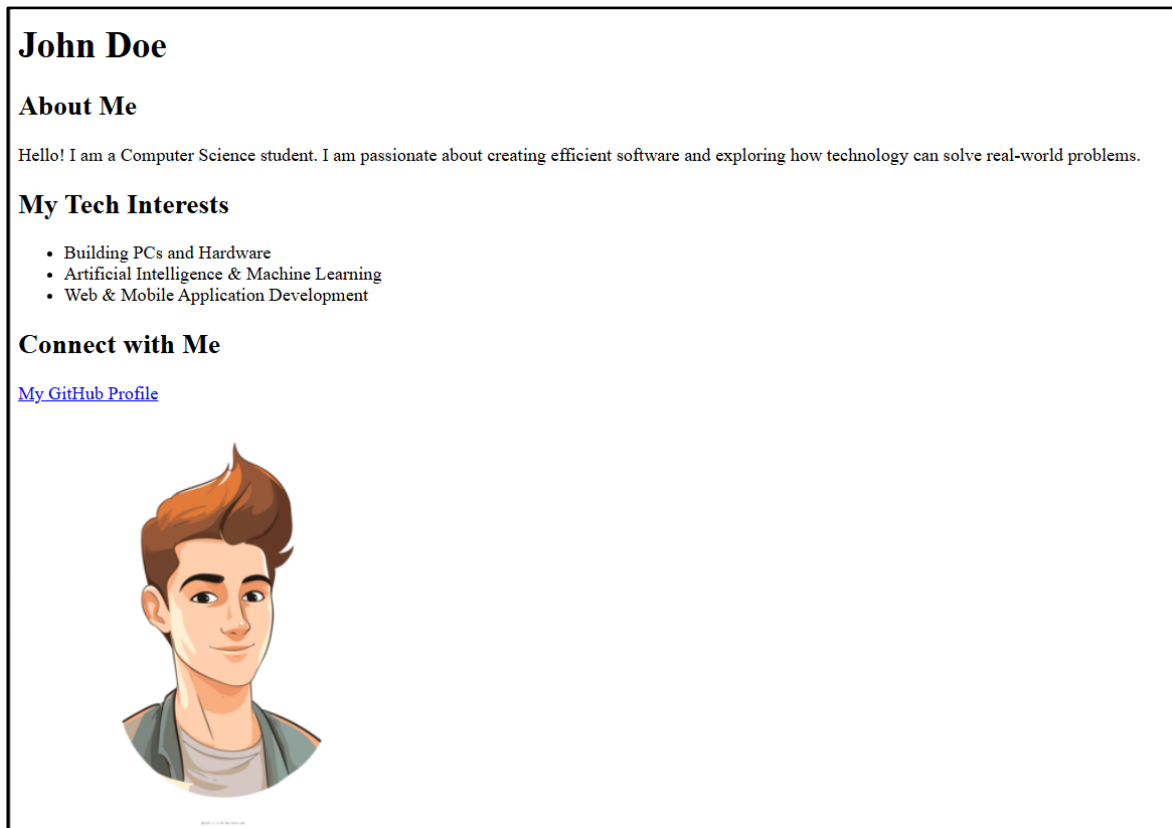

#### Task 4: Adding Links and Images

Add a third subheading (`<h2>`) called "Connect with Me".

1. Add a hyperlink (`<a>`) that points to <https://github.com> and displays the text "My GitHub Profile". Make sure it opens in a new tab.
2. Add a profile image using the `<img>` tag. You can use a placeholder image URL (e.g., <https://i.ibb.co/xSgKWVZj/pngtree-profile-pic-vector-png-image-6882563.png>) for now. Make sure to include an alt attribute describing the image.

*After completing Task 4, your interface should look like the image below:*

Index.html

---

## Submission Guidelines

Please follow the steps below to prepare and submit your completed lab work to the e-Kel student portal:

1. **Prepare Your Document:** Open Microsoft Word and create a new document. Save the file using your student number as the file name (e.g., XX\_2022\_XXX.docx).
2. **Include Your Code:** Copy all of the HTML code from your index.html file in Notepad and paste it clearly into your Word document.

## Capture Screenshots:

- Take a clear screenshot of your web browser showing the web page interface after completing **Task 4**. Paste this into your document below your code.

**Upload and Submit:** Locate the assignment submission link titled "**Lab 01 Submission**". Upload your saved Word document (.docx). Click "Save changes" to finalize your submission.
